

Google Sketchup Project: Your House

Purpose: You will use Google Sketch up to draw your house

Directions:

First you will start with a picture of your house. We will need a reference for your house, so you have two options: you may email pics of your house to your email account, or you may get satellite images of your house from <http://local.live.com> (now bing).

When you have the picture of your house zoomed in the browser, you can hit the *printscreen* button on your keyboard to copy the screen, then paste in MS Word. Then you can crop the image from the picture toolbar to display just your house. You will want multiple pictures of all sides of your house. On the website you will want to click the rotate button to show each side. Copy and paste each side to Word.

When you have the pictures, you may start your drawings. Please remember to use a correct SCALE to your house. Use the default person inserted in Sketchup to estimate how big your house will be drawn.

Details:

Please provide as much detail as possible. At minimum you should have all exterior features such as shutters, doors, windows, roof, as well as the landscaping like trees, bushes, and fences.

Grading:

You will receive 25 points for this assignment. Grading will be as follows:

General Sketching (is it to scale, does it look in proportion?)	5 pts.
Details : Exterior	5 pts.
Landscaping	5 pts.
Names of group members on drawing date/class per.	5 pts.
Organization (drawing fits on page and items organized)	<u>5 pts.</u>
	25 pts.

*partial credit may be earned for each part depending on the level of completeness/effort
